

# WWW.SCIENCEFORHUMANITY.ORG

The revolution in life sciences holds great promise for humanity – and great risk. History shows that major advances in science are almost always turned to hostile use. All scientists, health professionals and those who employ them have a responsibility to uphold the international rules preventing poisoning and deliberate spread of infectious disease. To learn more about the risks, rules and responsibilities, visit the ICRC at [www.scienceforhumanity.org](http://www.scienceforhumanity.org)

By working together, we can ensure that our brave new world doesn't become a jungle.
